**RIZWAN QAISAR OF THE OKLAHOMA MEDICAL RESEARCH FOUNDATION AWARDED
\$120,000 POSTDOC TRANSITION AWARD FOR TRANSLATIONAL RESEARCH IN AGING**

Oklahoma City, OK—Rizwan Qaisar, Ph.D., of the Oklahoma Medical Research Foundation has been awarded a \$120,000 Postdoctoral Transition Award in Aging. This award is made by the American Federation for Aging Research (AFAR), a leading non-profit organization dedicated to advancing biomedical research on aging, with support from the Irene Diamond Fund.

The goal of the program is to provide portable and flexible transitional funding for senior postdoctoral fellows as they develop and negotiate for junior faculty appointments and independent research programs.

Through this award, Dr. Qaisar—a Postdoctoral Fellow at the Oklahoma Medical Research Foundation—will research activation of the SERCA ATPase as an intervention for Sarcopenia.

“As we grow old our muscles tend to become weaker and smaller, a process called sarcopenia which is the leading cause of wheelchair bound life in the elderly. Among many causes of sarcopenia, the mishandling of muscle calcium by a group of muscle proteins is a significant contributor,” said Qaisar. “My research focuses on improving muscle size and strength by improving calcium handling in the aging muscle cells.”

The Irene Diamond Fund/AFAR Program distinguishes itself from other postdoctoral fellowship programs by providing full-time research training and flexible and portable grant support to senior postdoctoral fellows and providing leverage to negotiate for junior faculty appointments and independent research programs either at their own or other institutions. If the awardee successfully transitions to a tenure-track (or tenure-track equivalent) junior faculty position within 2 years, he/she may be eligible to receive an additional award of up to \$30,000, to be used as start-up funds in the new position.

“By giving these postdoctoral fellows this extra boost at a critical moment in their career path, AFAR is helping create a research pipeline that is essential to advancing better therapies for age-related diseases and discoveries that will help us all live healthier, longer,” said Jeremy Walston, M.D., Chair of the 2017 Selection Committee for the Irene Diamond Fund/AFAR Postdoctoral Transition Awards in Aging.

This year, AFAR has awarded seven of these Postdoctoral Training Awards totaling \$840,000. To date, AFAR has awarded more than \$175 million in grants to support more than 4,400 investigators and students at more than 500 leading institutions across the U.S., as well as Ireland, Israel, Italy and the United Kingdom.

As the world’s population over the age of 65 is growing at an unprecedented rate, AFAR’s support of age-related science is more critical than ever. AFAR Executive Director Stephanie Lederman notes: “By supporting investigators dedicated to healthy aging for more than three decades, AFAR has witnessed how our grantees have transformed the core knowledge of how our bodies age and how age-related illnesses can be harnessed to extend health. We are confident that these Diamond/AFAR awardees will make a substantial impact on the field and ultimately all of our lives.”

###

About AFAR The American Federation for Aging Research (AFAR) is a national non-profit organization whose mission is to support and advance healthy aging through biomedical research. Founded in 1981, AFAR has championed the cause and supported the funding of science in healthier aging and age-related medicine. To address the shortage of physicians and researchers dedicated to the science of healthier aging, AFAR funds physicians and scientists probing the fundamental mechanisms of aging, as well as specific diseases associated with aging populations at critical points throughout their careers. Learn at www.afar.org or follow AFAR.org on Twitter and Facebook.
